Tracker for GitHub

Anyone's GitHub year, in your Mac menu bar and widgets.

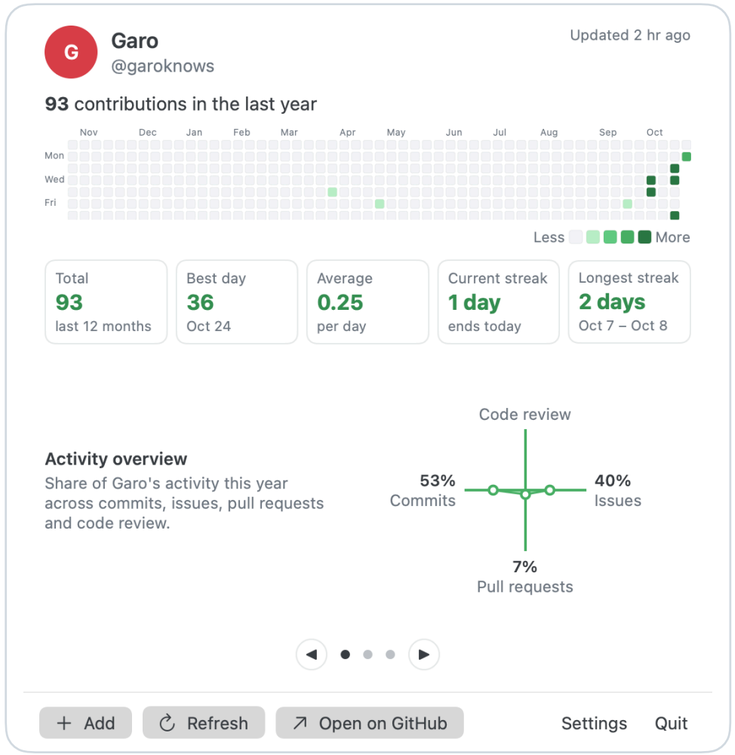

Free · open source (MIT) · no account · no tracking · October 2026

The best picture of a developer's work is hidden in a browser tab

- The contribution graph is on every profile and in hiring screens, and plenty of people keep streaks just to see it green.
- The Mac tools that showed it are **abandoned**. Reviews say "every username is invalid."
- **None** show GitHub's Activity overview, the Commits / Issues / PRs / Code review chart.
- None let you **flip between several people**.

Glance, swipe, done

- Year graph, 5 stats and the **Activity overview** quadrant
- Up to 10 favorites: **swipe**, ← →, or ◀ ▶
- Small, Medium, Large **widgets** with buttons
- Offline cache, 4 color themes, light and dark

Three kinds of people check this every day

Streak builders

"Show my green squares in the menu bar so I keep my streak going." A 7-day strip is a gentle daily nudge.

People who follow people

Managers, mentors, teachers and friends keep up to 10 favorites and swipe through their cards.

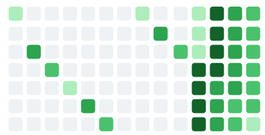

Widget people

"Put the graph on my desktop and never open an app." Small, Medium and Large, refreshing themselves.

Open source that markets itself

- **Screenshots are ads.** Developers post their setups.
- **GitHub-native distribution:** README, topics, Releases, Pages, then a Homebrew tap and Show HN.
- **Trust is the feature:** no analytics, MIT, Keychain-only token.
- **Easy to contribute:** one tested parser with saved fixtures.
- **Sustainable:** GitHub Sponsors, no paid tier, no lock-in.
- **Scoreboard:** downloads, stars, outside PRs, fix time when GitHub changes.

From your graph to your work

v2 · Issues as cards

Sign in with GitHub. Open issues by repo, label filters, one-click close, "my issues" widgets.

Teams and goals

Cohort dashboards for classes and OSS teams. Local streak reminders and weekly summaries.

Everywhere

Notarized build and Homebrew. iPhone and iPad widgets. GitLab and Codeberg support.
